

Measuring femicide in Lithuania

Femicide

Femicide can be understood as the extreme end of a continuum of violence against women that happens in all European Union Member States (¹). There is no standard agreed definition of femicide among EU Member States or around the world. The lack of a uniform definition hampers the measurement of femicide, which becomes invisible among general homicide data (²). The general concept of femicide refers to the killing of a woman or girl because of her gender. The United Nations Vienna Declaration on Femicide (³) was the first to identify different types of femicide, including:

- murder of women as a result of intimate partner violence;
- torture and misogynistic slaying of women;
- killing of women and girls in the name of honour;
- targeted killing of women and girls in the context of armed conflict:
- dowry-related killing of women;
- killing of women and girls because of their sexual orientation and gender identity;
- killing of aboriginal and indigenous women and girls because of their gender;
- female infanticide and gender-based sex selection foeticide;
- genital mutilation-related deaths;
- accusations of witchcraft;
- other types of femicides connected with gangs, organised crime, drug dealers, human trafficking and the proliferation of small arms.

Femicide in Lithuania

There is no definition of femicide in the Lithuanian Criminal Code. However, this type of offence may fall under other provisions of Lithuanian criminal law. The relevant articles for identifying femicide cases are, inter alia, Articles 129 and 130 (4).

Article 129 - Murder

- 1. A person who murders another person.
- 2. A person who murders (1) a young child; (2) a person in a helpless state; (3) his close relative or family member; (4) a pregnant woman; (5) two or more persons; (6) by torturing or another particularly cruel manner; (7) in a manner endangering other persons' lives; (8) by reason of disorderly conduct; ... (13) in order to express hatred towards a group of persons or a person belonging thereto on grounds of age, sex, sexual orientation, disability, race, nationality, language, descent, social status, religion, convictions or views shall be punished by imprisonment for a period of 8 to 20 years or by life imprisonment.

Article 130 - Murder in a state of passion

A person who murders a person in a state of sudden passion due to the victim's conduct that is unlawful or particularly offensive in respect of him or her or a person close to him or her shall be punished by a custodial sentence for a term of up to 6 years.

About the study

Data collection systems vary widely across EU Member States, as they draw on various sources. To improve the collection of administrative data on femicide, EIGE has been working to establish indicators that can harmonise data collection processes across Member States' jurisdictions.

EIGE has collected information from a wide variety of stakeholders through a questionnaire sent to official data providers and an online survey filled in by national experts. The ultimate goal is to identify a classification system of femicide with mutually agreed variables that can be used by all EU Member States.

Methodology for data collection

To address the lack of comparable data on violence against women, EIGE developed 13 indicators with uniform definitions of the multiple forms of intimate partner violence, femicide and rape (5). A detailed report regarding the methodology for the collection, reporting and validation of data, along with detailed metadata per country, has been published (6). The data presented in this factsheet refers to indicator 9 on intimate partner violence: 'Women victims of intimate femicide (aged 18 and over) committed by a male intimate partner (aged 18 and over), as a share of the women victims of homicide aged 18 and over'. The data can be accessed through EIGE's Gender Statistics Database(https://eige.europa.eu/gender-statistics/dgs/browse/genvio/genvio_int).

- (¹) This factsheet includes data collected before the United Kingdom left the EU, so the reference to EU Member States includes the United Kingdom.

Intimate partner femicide in Europe

From a statistical perspective, and based on the International Classification of Crime for Statistical Purposes (ICCS), the UN Office on Drugs and Crime (UNODC) highlights that intentional homicide of female victims perpetrated by intimate partners or family members is the most prevalent form of femicide (7). UNODC estimates that, in Europe (8), about 29 % of female victims of homicide (9) are killed intentionally by an intimate partner.

- Female victims of intentional homicide in Europe
- Female victims of intimate partner homicide in Europe

Intimate partner femicide in Lithuania

From a statistical perspective, the working definition that the European Institute for Gender Equality (EIGE) uses for femicide is 'killing of a woman by an intimate partner and the death of a woman as a consequence of a practice that is harmful to women. Intimate partner is understood as a former or current spouse or partner, whether or not the perpetrator shares or has shared the same residence with the victim'. In Lithuania, most femicides would be covered by the Criminal Code articles identified above. According to data from the Ministry of the Interior, in 2017 there were 22 female (10) victims of homicide (11) or attempted homicide, of whom 14 % were victims of intimate partner femicide (12).

- Female victims of completed or attempted homicide in Lithuania
- Victims of completed or attempted intimate partner femicide in Lithuania

Female victims of homicide and intimate partner femicide in Lithuania

The official administrative data used in Figure 1 is collected by the Information Technology and Communications Department under the Ministry of the Interior. EIGE has gathered data on homicide and intimate partner femicide for 2014 to 2018.

Figure 1 includes data regarding female victims of homicide and attempted homicide, as well as victims of completed and attempted intimate partner homicide. The data includes only women aged over 18 years. The trends in both homicides and intimate partner femicides have been declining since 2014.

Type of relationship between the victim and the perpetrator

The Information Technology and Communications Department under the Ministry of the Interior collects data about the relationship between the victim and the perpetrator according to the classifications provided by police when registering the crime. When filling in the register, police indicate whether the natural person has been victimised by a spouse, cohabitant (partner), father, mother, son, daughter, sister, brother, other relative or other person related to them during the commission of the criminal act.

Figure 1: Female victims of homicide and intimate partner femicide (including attempts) in Lithuania

Source: EIGE's Gender Statistics Database.

- (7) UN Office on Drugs and Crime (UNODC) (2019), Global Study on Homicide Gender-related killing of women and girls, UNODC, Vienna.
- (8) Data from UNODC includes European jurisdictions other than the EU Member States. There is no estimation of the percentage of female victims of homicide who were victims of intimate partner femicide limited to EU Member States.
- (9) The term 'homicide' is used when reporting UNODC data given that it is the term used in the original source (p. 17). The gender-related motivation is not recorded, because of the lack of a standardised definition. However, it is clear from the report that this data quantifies a significant share of all gender-related killings of women and girls.
- (10) The term 'female' is used instead of 'woman', as it is not always possible to disaggregate data by the victim's age, meaning that the victim could be either a woman or a girl aged under 18 years.
- (11) The term 'homicide' is used given that the gender-related motivation for the intentional homicides is not recorded, and therefore it is not possible to classify all the killings as femicides.
- (12) Data is available at: https://eige.europa.eu/gender-statistics/dgs/indicator/genvio_int_adm_ipv__ipv_indic_9/metadata

Collecting administrative data on femicide

What is administrative data? Administrative data is collected for recording, organising and monitoring purposes (¹³). Administrative data on femicide can be obtained from different institutions, namely those that are involved in criminal investigations, prosecutions, the punishment of perpetrators and victim support – that is, institutions in the **police and justice sectors**. Administrative data might include information about the prevalence and types of femicide, the characteristics of the victim, the perpetrator and their relationship, the characteristics of and motive for the crime, and data about the criminal process.

In order to help policymakers design effective policies to combat femicide, it is necessary to understand the nature and prevalence of the issue. The collection of comparable administrative data on femicide across Member States is key to gaining this understanding (14). It is particularly important that the motive for the killing is established by the police or judiciary and that this is then translated into standardised statistical data. The ICCS is a standardised tool for obtaining comparable

administrative data. However, it lacks a gender-related motive variable. This means that the concept of femicide cannot be properly operationalised, which prevents the collection of data that fully captures the phenomenon. The collection of data on femicide would make the issue more visible, which would strengthen the political will to eradicate it. Administrative data on femicide also enables countries to monitor trends over time and evaluate the effectiveness of measures.

What administrative data on femicide is available in Lithuania?

Definition of femicide and availability of data	
Definition of femicide used for statistical purposes	No
Collection of data on femicide	Yes, official data

There is one institution collecting and analysing data regarding femicide in Lithuania: the Information Technology and Communications Department under the Ministry of the Interior (15). Where data on femicide in this factsheet is drawn from this

institution, this is indicated by (a). There may be other institutions or researchers who collect and analyse data on femicide in Lithuania.

	Institution (ª) Information Technology and Communications Department under the Ministry of the Interior
Type of data collection	Official
Sources of data	Law enforcement institutions
Stage at which the homicide is established as a femicide	Registered at pre-trial stage
Stage at which the homicide is registered as a femicide	Not established
Regularity of data collection	Continuous
Network(s) with which information is shared	Law enforcement institutions, judicial authority and statistics authorities
Availability of data to the public	Data publicly available

Administrative data collection in Lithuania is informed only by official sources. In line with EIGE's data collection, official administrative data on the total number of female victims of homicide and intimate partner femicide is displayed for 2014 to 2019. However, data may be available in Lithuania for other years.

Female homicide in EU Member States and the United Kingdom (Eurostat)

At the EU level, based on the ICCS, Eurostat compiles data on intentional female homicides, focusing on intimate partner and family-related homicides, disaggregated by age, gender and relationship with the perpetrator. The data from Eurostat presented in Figure 2 reveals that, in 2018, the rate of female victims of homicide in Lithuania was 3.57 per 100 000 inhabitants, the second highest rate among the 24 Member States for which information is available and the United Kingdom. Con-

sidering the 14 jurisdictions for which information is available on female victims of homicide perpetrated by family members and relatives, Lithuania has the fifth highest rate of female victims of homicide perpetrated by family and relatives (0.40) and the eighth highest rate (0.26) of female victims of intentional homicide perpetrated by intimate partners (out of 15 jurisdictions for which information is available).

Figure 2: Rate of female victims of intentional homicide in EU Member States and the United Kingdom (2018)

Data information

Eurostat regularly publishes figures on crime and criminal justice. Intentional homicides are recorded by the police in each of the Member States and the United Kingdom. It is not possible to collect information about the gender-related motivation for homicide, the sex of the perpetrator or the age of the perpetrator using this database. Therefore, it is not possible to

provide precise data on femicide. Figures for 2008 onwards are based on the joint Eurostat–UNODC data collection. In this database, homicide is classified by the ICCS.

Data is available on Eurostat's website (https://ec.europa.eu/eurostat/data/database).

Key findings

- Lithuania does not have a legal definition of femicide. However, the perpetrator may be liable for murder or murder in a state of passion.
- There is one institution that collects and analyses data for the identification of femicide. Data is available for intimate partner and family-related homicide.
- EIGE has gathered data on homicide and intimate partner femicide for 2014 to 2018; however, data may be available in Lithuania for other years. Available data includes information about the characteristics of the victim and the perpetrator and contextual variables.

Recommendations

The collection of accurate and comparable data on femicide by the police and justice sectors across Member States helps to increase knowledge and improve responses to prevent femicide (16). It is therefore important to:

- develop a femicide definition for statistical data collection, in order to reflect the specific circumstances relating to the killing of women;
- implement a process of continuous data collection;
- establish comprehensive data collection, adding variables that are important for detecting key aspects of femicide,

such as those describing the context and the circumstances of the killing, the gender-related motivation, and the victim and perpetrator characteristics, in order to systematise and harmonise the collection of data for statistical USE.

- cross-reference the variables of the victim and those of the perpetrator, and analyse them using an intersectional approach;
- ensure that the gender dimension of homicide data is made visible.

This factsheet is based on information from EIGE's study 'Advancing administrative data collection on intimate partner violence and gender-related killings of women' (2021) and has been prepared by the Alternative and Response Women's Association (UMAR).
