

Gender equality prospects in labour markets transformed by artificial intelligence and platform work

Apžvalga

Description

EIGE is looking into the opportunities and challenges for gender equality in labour markets transformed by artificial intelligence (AI) and platform work, as requested by the Slovenian Presidency of the EU.

The study will assess the following issues from a gender perspective:

- AI-related transformation of the labour market, including working conditions, work relationships, the organisation of work and content.
- Working conditions and work patterns of women and men engaged in platform work.
- EU and national policy approaches to regulate platform work, especially key regulatory challenges (such as employment status, access to social protection and rights at work).

The results will be available in December 2021.
