

FGM/C situation analysis in European countries. Discussion paper for expert meeting. The Hague, the Netherlands, 12 and 13 September 2011 and personal e-mail from Exterkate dd 24 January with an update for 2011

Data collected from website of National Bureau of Statistics (CBS)

Data Collection

Author(s)

Exterkate M, de Jager M

Year of data collection

2010-2011

Study population

Women living in the NL coming from the 29 countries where FGM is practiced

Prevalence data on FGM

2005: 51,000 women; 2010: 60,000 women and 2011: 64,000 women

Disaggregated data per country of origin

Well over 80% originate from: Ethiopia/Eritrea, Ghana, Nigeria, Sierra Leone, Sudan and Somalia, Egypt, DRC

Disaggregated data per age

In 2011, 44 % of these women from FGM practicing countries or having parents from these countries is below 20 years.

Limitations of study

The prevalence rates of the countries of origin have not been multiplied with number of migrants (extrapolation method), due to the many limitations of this method. The data were collected to prioritise FGM activities in the NL.
