

Gender-based violence

Gender-based violence

Gender-based violence is both a cause and a consequence of gender inequality. Therefore, providing resources to put an end to it is an important part of our work. We provide research, statistics and expertise to help understand the problem and the way it affects our societies. We have carried out a broad range of groundbreaking studies on gender-based violence in Europe.

How much do we all pay to deal with violence? Why do we need to improve administrative data collection from police and justice? Is female genital mutilation a problem in the European Union? Is cyber violence a real threat? You will find answers to these and many other questions in our research.

What is gender-based violence?

Featured

Most 1 in 2 women in the EU have experienced psychological violence

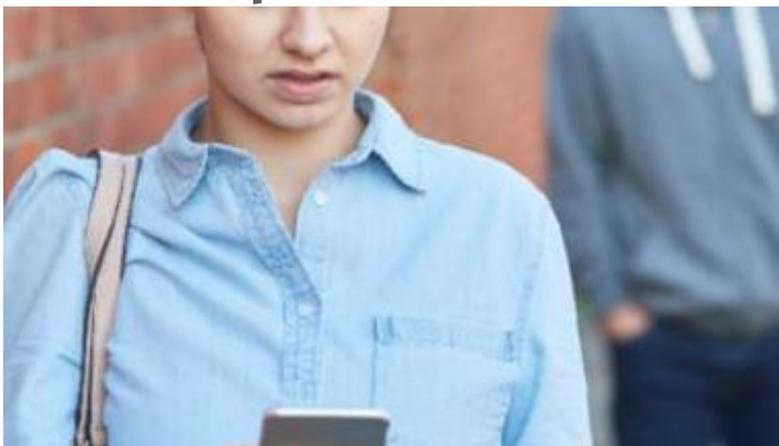

IGE's latest report on coercive control and psychological violence across the EU Member States proves high prevalence. However, increased criminalisation measures are starting to be put in place. More needs to be done.

Austria-EIGE meetings underline importance of comparable data to measure and fight femicides

To fight crimes of femicide – when a woman is killed because of her gender – it is key to identify and count cases accurately.
