
GenderAPP

The GenderAPP was developed as a part of the SATIN project the aim of which is to enable end-users without prior programming skills to create their own apps. GenderAPP is one of the examples how gender equality and diversity perspectives are integrated in the SATIN development work. To see the developed "Checklist – gender mainstreaming" in practice please visit:

http://cdn.satin.codemill.se/compositions/live/App_9ce1c9c691dd47fb93015... Note: You may also run this app from your desktop but to do so please use any of the web browsers Firefox or Chrome.
