

Benefits of gender equality through infrastructure provision: an EU-wide survey

In 2015-2016, the European Institute for Gender Equality (EIGE) conducted a restricted survey in the 28 EU Member States (EU-28) on the benefits of gender-sensitive infrastructure

The survey aimed to collect direct information on the importance of existing infrastructure services for everyday activities, and the level of well-being that public infrastructure provides.

This study aims to close the research gap and offer a tool for scholars and policymakers to better understand people's needs and plan a more efficient and balanced allocation of public resources.
