

Female genital mutilation: How many girls are at risk in Greece?

Female genital mutilation
How many girls are at risk in Greece?

Greece
It is estimated that **25% to 42% of girls are at risk** of female genital mutilation (FGM or FGM-C) in Greece, out of a total population of 1 767 girls aged 15-18 originating from countries where female genital mutilation is practised.

Girls at risk of female genital mutilation in Greece mainly originate from Egypt, Ethiopia and Nigeria.

These findings are from the latest research conducted by the European Institute for Gender Equality (EIGE) on female genital mutilation in the EU (5).

Female genital mutilation is a serious form of gender-based violence & a violation of human rights. It is a practice that involves the partial or total removal of the external female genitalia or other injury to the female genital organs for non-medical purposes (1).

According to the World Health Organization, female genital mutilation refers to all procedures involving the partial or total removal of the external female genitalia or other injury to the female genital organs for non-medical purposes (1).

About the study and the European Institute for Gender Equality

The study 'Estimation of girls at risk of female genital mutilation in the European Union – Belgium, Greece, France, Italy, Cyprus and Malta' was conducted in 2017-2018. It supports the EU institutions and EU Member States in providing more accurate information on female genital mutilation and its risks among girls in the European Union.

EIGE is the EU knowledge centre for gender equality. It supports policy-makers and civil society organisations in their efforts to promote equality between women and men & to build on local initiatives, by providing them with reliable, up-to-date and comparable and evidence-based information on gender equality in the EU.

More information is available at www.eige.europa.eu

What are the results, over time? The percentage of girls at risk in the European Union has increased from 14% in 2011 to 42% in 2018. The absolute number of girls at risk has also increased. The total population of migrant girls from FGM-practising countries living in Greece has slightly increased from 1 086 to 1 767 over the same time frame.
