

Gender Equality Index 2017: France

The Gender Equality Index 2017 examines the progress and challenges in achieving gender equality across the European Union from 2005 to 2015. Using a scale from 1 (full inequality) to 100 (full equality), it measures the differences between women and men in key domains of the EU policy framework (work, money, knowledge, time, power and health).

The Index also measures violence against women and intersecting inequalities. These are satellite domains and are part of the framework of the Gender Equality Index, but do not have an impact on the overall score. Intersecting inequalities show how gender intersects with age, education, family composition, country of birth and disability. The Gender Equality Index provides results for each domain and sub-domain for the EU and its 28 Member States.
