

Gender equality in power and decision-making

Overview

Description

This publication is part of EIGE's broader mandate to monitor progress towards gender equality within the EU policy framework, specifically in relation to the strategic objectives of the Beijing Platform for Action (acknowledged by the European Council in 1995).

The report looks at how Member States fared on gender equality in power and decision-making positions within bodies of public, economic and social power between 2003-2014. The report also presents new data on decision-making in sports organisations.
