

Gender Statistics Database 2021

Overview

Description

EIGE's Gender Statistics Database presents data related to gender equality, in line with the EU's political priorities.

EIGE is expanding its data on women and men in decision-making to include transport and the environment. During 2021, we will publish new indicators on farm managers and land ownership.

We are also getting more data on leadership roles held by women and men during the COVID-19 pandemic, to include an analysis of gender balance on Covid-19 boards and taskforces, as well as in ministries of health.

In the first quarter of 2021, we will publish the latest version of the **statistical briefs** on gender balance in politics and on corporate boards.

The existing datasets of the database will be updated as soon as new data becomes available.
