

Costs of gender-based violence in the European Union

Gender-based violence is one of the most severe forms of gender inequality. This issue affects women disproportionately as it is directly connected to the unequal distribution of power between women and men.

The elimination of gender-based violence and the protection of victims is a goal of the European Union and one of the most important areas of work for the European Institute for Gender Equality (EIGE). Identifying the economic costs of gender-based violence contributes to better informed decision-making and supports policy development.

EIGE's work

EIGE has carried out two studies on the costs of gender-based violence in the European Union. The most recent study provides updated and enriched estimates of the costs of gender-based and intimate partner violence in the EU. The previous study from 2014 analysed the methodological options to measure gender-based violence.

2021: The costs of gender-based violence in the European Union

This study estimates the costs of gender-based violence using existing methodology from the 2014 study. The report focuses on intimate partner violence as a subset of gender-based violence and provides an updated estimate of the costs of gender-based and intimate partner violence in the EU.

The study is accompanied by the technical report, which provides details on the method and data used for the cost estimation for the UK case study, as well as the extrapolation of the results to the EU Member States.

Main findings

EIGE has estimated that the cost of gender-based violence across the EU is €366 billion a year. Violence against women makes up 79 % of this cost, amounting to €289 billion. Intimate partner violence makes up almost half (48 %, €174 billion) of the cost of gender based violence. Intimate partner violence against women makes up 87 % of this sum (€151 billion)

EIGE's case study analysed three main types of costs:

- Lost economic output relating to a variety of costs associated with the work status and productivity of victims.

- Costs of public services covering health services, personal costs, criminal and civil justice systems, self-funded legal costs, housing aid costs, housing aid and child protection as well as specialist services.

- Physical and emotional impact on the victims accounting for reduction in the quality of life of a victim as a consequence of violence.

EIGE's new study indicates that the biggest cost comes from physical and emotional impact (56 %), followed by criminal justice services (21 %) and lost economic output (14 %). Other costs can include civil justice services (for divorces and child custody proceedings for example), housing aid and child protection.

Costing studies create a better understanding of the extent and associated costs of gender-based violence and support better resource allocation across different policy areas. However, in order to monitor the costs closely, better survey data on the prevalence of gender-based violence and administrative data on the costs and use of services are urgently needed.

Gender-based violence costs us all

The pain and suffering caused by gender-based violence does not have a price. But knowing the different costs of violence can help countries channel money to where it's really needed - and where it's most cost-effective.

Gender-based violence places large costs on the economy and on society as a whole:

366 billion each year

Violence against women makes up **79 %** of this cost.

The estimated cost of gender-based violence against women and men in the. **This is the break-down of costs:**

The **COST OF INTIMATE PARTNER VIOLENCE*** is **174 billion** a year. Intimate partner violence against women makes up **87 %** of this cost.

*intimate partner violence refers to a sub-set of gender-based violence which is defined by the Council of Europe as 'all acts of physical, sexual, psychological or economic violence between former or current spouses or partners, whether or not the perpetrator shares or has shared the same residence with the victim.'

No country can afford gender-based violence

Member State	Cost of gender-based violence	Member State	Cost of gender-based violence
Belgium	€ 9,4 bn	Lithuania	€ 2,3 bn
Bulgaria	€ 5,7 bn	Luxembourg	€ 0,5 bn
Czechia	€ 8,7 bn	Hungary	€ 8 bn
Denmark	€ 4,8 bn	Malta	€ 0,4 bn
Germany	€ 68,1 bn	Netherlands	€ 14,1 bn
Estonia	€ 1,1 bn	Austria	€ 7,3 bn
Ireland	€ 4 bn	Poland	€ 31,2 bn
Greece	€ 8,8 bn	Portugal	€ 8,4 bn
Spain	€ 38,5 bn	Romania	€ 16 bn
France	€ 55,1 bn	Slovenia	€ 1,7 bn
Croatia	€ 3,3 bn	Slovakia	€ 4,4 bn
Italy	€ 49,1 bn	Finland	€ 4,5 bn
Cyprus	€ 0,7 bn	Sweden	€ 8,3 bn
Latvia	€ 1,6 bn		
		EU-27	€ 366 bil

EIGE has **calculated the cost of gender-based violence in the EU** and in each Member State based on extrapolated data from the United Kingdom. This links the cost of **gender-based violence** in each EU Member State directly to its population size.

2014: Estimating the costs of gender-based violence in the European Union

The purpose of the study was to identify and recommend appropriate methodologies to measure the cost of gender-based and intimate partner violence in the EU. Following an analysis of existing methodologies for costing studies of gender-based violence, the study recommends a new methodology, illustrated in a case study centred on the UK.
