

National Action Plan for the implementation of the National Strategy to prevent violence against children in the Czech republic, 2009-2010

This action plan (18 p.) was issued as part of a broader strategy to eradicate violence against children. It adopts a transversal (mainstream) approach that mobilizes a wide range of institutions to improve the collection of data, the methodology to report abuses and the procedure to implement protection measures. It also addresses the organisation of an awareness-rising campaign. It does not specifically address mutilations of any kind.
