

# Sex-disaggregated data

“

*They allow for the measurement of differences between women and men on various social and economic grounds and are one of the requirements in obtaining gender statistics*

”

Any data on individuals broken down by sex. Gender statistics rely on these sex-disaggregated data and reflect the realities of the lives of women and men and policy issues relating to gender.

Data collected and tabulated separately for women and men. They allow for the measurement of differences between women and men on various social and economic dimensions and are one of the requirements in obtaining gender statistics. However, gender statistics are more than data disaggregated by sex. Having data by sex does not guarantee, for example, that concepts, definitions and methods used in data production are conceived to reflect gender roles, relations and inequalities in society.
