

# Tuning out: Women in the UK Radio Industry

Tuning out documents research conducted by Skillset in 2011. The report provides an overview of the employment of women in the radio industry - exploring working patterns, qualifications and skills development, compared to those of men. Some key findings include: i) women working in radio were better qualified than men but were paid less; ii) women were less likely to make it to the top management and board level positions; iii) older women were less well represented; iv) 16% of women in radio have dependent children, compared to 25% of men, suggesting that many women leave when they have children.
