

Gender equality and youth: the opportunities and risks of digitalisation – Factsheet

Digital technologies offer young women and men innovative ways to get involved in politics. From receiving instant news notifications on political developments, to engaging in online debates and expressing opinions on social media, political and civic participation has become faster and easier. Yet, one of the downsides experienced by this generation, who is the most digitally skilled in the EU, is the risk of online abuse.

This factsheet is based on the report Gender equality and youth: opportunities and risks of digitalisation (forthcoming), prepared at the request of the Austrian Presidency. It explores how digital technologies can be used to promote gender equality and also focuses on the gender-related risks of digitalisation for young women and men. More information on the data referred to in the text, including exact references can be found in the report.
