

Gender Equality Index 2017: Austria

Gender Equality Index 2017: Austria

The Gender Equality Index 2017 assesses the progress and challenges in achieving gender equality across the European Union from 2005 to 2015. Using a scale from 1 (full inequality) to 100 (full equality), it measures the differences between women and men in key domains of the EU policy framework (work, money, knowledge, time, power and health). The Index also measures violence against women and intersecting inequalities. These are satellite domains and are part of the framework of the Gender Equality Index, but do not have an impact on the overall score. Intersecting inequalities show how gender intersects with age, education, family composition, country of birth and disability. The Gender Equality Index provides results for each domain and sub-domain for the EU and its 28 Member States (1).

Progress in gender equality in Austria, 2005-2015

In the Gender Equality Index 2017 Austria achieved a score of **63.3 out of 100**. This is slightly below the EU-28 score of 66.2 and progress has been slower than in the EU on average. Austria's best performing of 100 place for women's rights.

The highest scores in Austria are in the domains of **health** and **money**. The gender equality score in the domain of **health** shows great gender balance in access to services and overall health status. It has remained stable and well above the EU-28. The challenge in the domain of **money** has progressed, although the gender gap among the population is not yet closed.

The biggest improvements took place in the domains of **power** and **knowledge**. The score for **power** is the lowest in Austria. Improvement in this domain is largely due to a more equal representation of women and men in decision-making in the corporate sphere. Despite an improvement in educational attainment and participation, the domain of **knowledge** shows persistent engagement of study fields across traditional gender lines.

In the domain of **work**, Austria is ranked 95th in the EU-28. Participation in the labour market has improved, but continued segregation of women and men into certain professions has impeded progress.

The lowest score was in the domain of **time**, which has progressed marginally. The division of time allocated to social activities has become more gender unequal.
