

# Gender Equality Index 2017: Estonia

Gender Equality Index 2017:  
Estonia

The Gender Equality Index 2017 assesses the progress and challenges in achieving gender equality across the European Union from 2005 to 2015. Using a scale from 1 (full inequality) to 100 (full equality), it measures the differences between women and men in key domains of the EU policy framework (work, money, knowledge, time, power and health). The Index also measures violence against women and intersecting inequalities. These are satellite domains and are part of the framework of the Gender Equality Index, but do not have an impact on the overall score. Intersecting inequalities show how gender intersects with age, education, family composition, country of birth and disability. The Gender Equality Index provides results for each domain and sub-domain for the EU and its 28 Member States.<sup>1)</sup>

### Progress in gender equality in Estonia, 2005-2015

In the Gender Equality Index 2017, Estonia achieved a score of **56.7 out of 100** which is an increase of 4.2 points since 2005. This score is about 10 points below the EU28 average but progress is happening at a slightly faster pace than in the EU. Estonia has managed to set aside on the index table since 2005, to reach 20th place, 18 domains (satellite progress).

The gender equality score in the domains of **time and health** are the highest in Europe while Estonia scores on the domain of **work** among the top five in the EU28, its score in the domain of **health** is at the bottom. Both economic growth from 2005 to 2015, the situation of **time** to join activities has become slightly more equal between women and men. Challenges remain in the domain of **time** to social activities.

Though part-time employment has been stable in the context of **money** trends to improve gender equality in earnings and income in the sector **time**, poverty has increased slightly, especially for women. The situation in the domain of **work** has slightly improved, closely by increased participation of women and men in the labour market.

The lowest score was in the domains of **power and knowledge**. Although the score is low, the domain of **power** shows improvements, highly thanks to progress in women's representation in decision-making positions in the political and social spheres. Gender equality in knowledge has also improved but at a slower pace.

**↑4.2 Change in score from 2005 to 2015**
