

Gender Equality Index 2017: Hungary

Gender Equality Index 2017: Hungary

The Gender Equality Index 2017 assesses the progress and challenges in achieving gender equality across the European Union from 2005 to 2015. Using a scale from 1 (full inequality) to 100 (full equality), it measures the differences between women and men in key domains of the EU policy framework (work, money, knowledge, time, power and health). The Index also measures violence against women and intersecting inequalities. These are satellite domains and are part of the framework of the Gender Equality Index, but do not have an impact on the overall score. Intersecting inequalities show how gender intersects with age, education, family composition, country of birth and disability. The Gender Equality Index provides results for each domain and sub-domain for the EU and its 28 Member States (1).

Progress in gender equality in Hungary, 2005-2015

In the Gender Equality Index 2017 Hungary achieved a score of **50.8 out of 100**, which is 4.3 points higher than in 2005, but approximately 15 points below the EU28 average. Hungary is ranked 27th out of the 28 Member States. It has gone down two positions since 2005. Hungary's score is below the EU28 average in all domains.

The gender equality scores in the domain of **health** is the highest in Hungary. It ranks 10th in the EU, gaining three positions since 2005. In some of health sub-domains Hungary ranks 12th highest in the European Union, in the best score for the country.

The largest improvement has taken place in the domain of **money**, due to an increase of the gender equality in savings and income. Hungary has the 10th highest score of the EU28 in the sub-domain of economic status, which deals with the risk of poverty and conditions of wealth in the population in the field. However, the situation regressed by three points between 2005 and 2015.

The score in the domain of **knowledge** has regressed. The situation has improved in terms of gender equality in the sub-domain of attainment and participation, whereas other sub-domains in terms of aggregation.

The score in the domain of **work** has progressed slightly since 2005. There is much scope for improvement, especially in the sub-domains of employment and quality of work, which ranks 25th out of the 28 Member States.

The greatest challenges are in **power** and **time**, which are Hungary's lowest scoring domains.

Hungary's score for **power** is the lowest of all the Member States, despite a slight improvement from 2005 to 2015. Only the situation in the sub-domain of economic power is relatively better, with Hungary ranking 20th in the EU28.

The situation in the domain of **time** has regressed. The decrease in the score refers to the worsening of gender equality in the time allocated to unpaid work, to paid working time at home.

14 Change in score from 2005 to 2015

(1) The Gender Equality Index 2017 is based on the data of European Union countries. EU Labour Force Survey, European Health Interview Survey, EU Survey on Income and Living Conditions, European Survey of Health and Safety Working Conditions, Survey of the Gender Equality Database (GEMIS) and data on Economic Inequality and the Environment. Aggregating 16 satellite domains (Health, Justice, Violence against women, 2008-2016) for data on intersecting inequalities. The age of the interview population for the indicator Gender EQ, 16+, is 16, depending on the version used.

The Gender Equality Index 2017 examines the progress and challenges in achieving gender equality across the European Union from 2005 to 2015. Using a scale from 1 (full inequality) to 100 (full equality), it measures the differences between women and men in key domains of the EU policy framework (work, money, knowledge, time, power and health).

The Index also measures violence against women and intersecting inequalities. These are satellite domains and are part of the framework of the Gender Equality Index, but do not have an impact on the overall score. Intersecting inequalities show how gender intersects with age, education, family composition, country of birth and disability. The Gender Equality Index provides results for each domain and sub-domain for the EU and its 28 Member States.
