

Gender Equality Index 2020 IRELAND

Progress on gender equality in Ireland since 2010

With 72.2 out of 100 points, Ireland ranks 7th in the EU on the Gender Equality Index. Its score is 4.3 points above the EU's score.

Since 2010, Ireland's score has increased by 6.8 points (+ 0.9 points since 2017). Ireland has progressed faster than the EU and improved its position by two places since 2010.

Best performance

Ireland's score is highest in the domain of health (91.3 points), in which it ranks 5th. Its second highest score is in the domain of money (86.5 points), ranking 8th among all countries.

Most room for improvement

Gender inequalities are most pronounced in the domain of power (55.8 points). However, Ireland is among the better-performing countries in this domain (ranking 10th).

Biggest improvement

Since 2010, Ireland's score has improved the most in the domain of power (+ 18.6 points), increasing its ranking by two places. Ireland's rankings have also improved in the domains of work and time (by one place).

Least progress

Progress has stalled in the domain of health (+ 0.6 points), in which Ireland lost one place in the rankings. It also dropped by five places in the domain of money.

About the Index

Each year, we score the EU Member States and the EU as a whole to see how far they are from reaching gender equality. The Index uses a scale of 1 to 100, where 1 is for total inequality and 100 is for total equality.

The scores are based on the gaps between women and men and levels of achievement in six core domains – work, money, knowledge, time, power and health – and **their subdomains. Two additional domains** are included in the Index but do not have an impact on the final score. The domain of intersecting inequalities highlights how gender inequalities manifest in combination with age, (dis)ability, country of birth, education and family type. The domain of violence against women measures and analyses women's experiences of violence. The Index is composed of **31 indicators**. The Gender Equality Index 2020 also includes **a thematic focus on digitalisation and the future of work**.

Key highlights

Increased participation in employment

The full-time equivalent (FTE) employment rate increased for women and men.

Nomen on the board of the central bank

2020 27 %

2019 33 %

Improvements in economic decision-making

The shares of women on the boards of the largest publicly listed companies and on the board of the central bank increased.

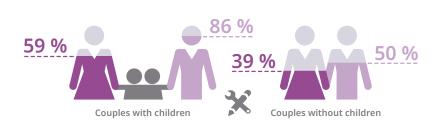

Women's participation in social decision-making is among the highest in the EU

Ireland has reached gender parity when it comes to women board members of publicly owned broadcasting organisations.

IE 50 %

EU 37 %

Gender gap in employment has widened, especially for some groups

The gender gap in full-time equivalent employment rate (FTE) is much wider between women and men in couples with children than in couples without children.

Inequality in economic situation

More women are at risk of poverty than men. Lone parents (42 %), single women (33 %) and single men (38 %) face the highest risk of poverty in Ireland.

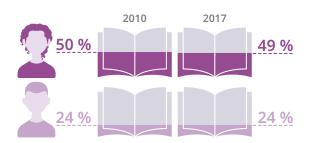

14 %

%

2010 14 %

2018

Uneven concentration of women and men in education is a persistent problem

More women than men studied education, health and welfare, or humanities and the arts.

Why is there no score for the violence domain?

There is no new data to update the score for violence, which is why no figure is given. Eurostat is currently coordinating an EU-wide survey on gender-based violence, with results expected in 2023. EIGE will launch a second round of administrative data collection on intimate partner violence, rape and femicide in 2022. Both data sources will be used to update the domain of violence in the Gender Equality Index 2024.

Unlike the other domains of the Index, the domain of violence does not measure differences between women's and men's situations; rather, it examines women's experiences of violence (prevalence, severity and disclosure). The overall objective is not to reduce the gap in violence between women and men but to eradicate violence completely.

Data gaps mask the true scale of violence.

The EU needs comprehensive, up-to-date and comparable data to develop effective policies that combat violence against women.

No data available

Violence at a glance

Female genital mutilation

1 % to 11 % of 14 577 girls (in the resident migrant population) are at risk of female genital mutilation

Source: EIGE

4 % of women experienced online harassment

Source: Eurofound, European Quality of Life Survey

During the COVID-19 lockdowns, women in violent relationships were stuck at home and exposed to their abuser for long periods of time, putting them at greater risk of domestic violence. Even without a pandemic, women face the greatest danger from people they know.

Istanbul Convention: state of play

The Istanbul Convention is the most comprehensive international human rights treaty on violence against women and domestic violence. Ireland signed the Istanbul Convention in May 2015 and ratified it in March 2019. The treaty entered into force in July 2019.

Thematic focus on digitalisation and the future of work

The Gender Equality Index 2020 focuses on digitalisation and the future of work. The thematic focus looks at three areas:

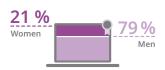

- use and development of digital skills and technologies;
- digital transformation of the world of work (segregation, working conditions, work-life balance);
- broader consequences of digitalisation for human rights, violence against women and caring activities.

Above basic digital skills among those with high level of formal education

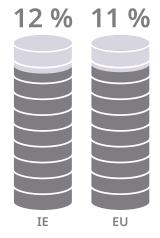

ICT specialists

European Institute for Gender Equality

The European Institute for Gender Equality (EIGE) is the EU knowledge centre on gender equality. EIGE supports policymakers and all relevant institutions in their efforts to make equality between women and men a reality for all Europeans by providing them with specific expertise and comparable and reliable data on gender equality in Europe.
