

Progress on gender equality in Cyprus since 2010

With 56.9 out of 100 points, Cyprus ranks 21st in the EU on the Gender Equality Index. Its score is 11 points lower than the EU's score.

Since 2010, Cyprus's score has increased by 7.9 points (+ 0.6 points since 2017). Making slightly faster progress towards gender equality than other Member States, Cyprus has improved its position by six places.

Best performance

Cyprus's highest scores are in the domains of health (88.0 points) and money (81.7 points), in which it also performs best in comparison with other Member States (ranking 13th for both).

Most room for improvement

Gender inequalities are most pronounced in the domain of power (29.8 points), where Cyprus also performs worst in comparison with other Member States (ranking 24th).

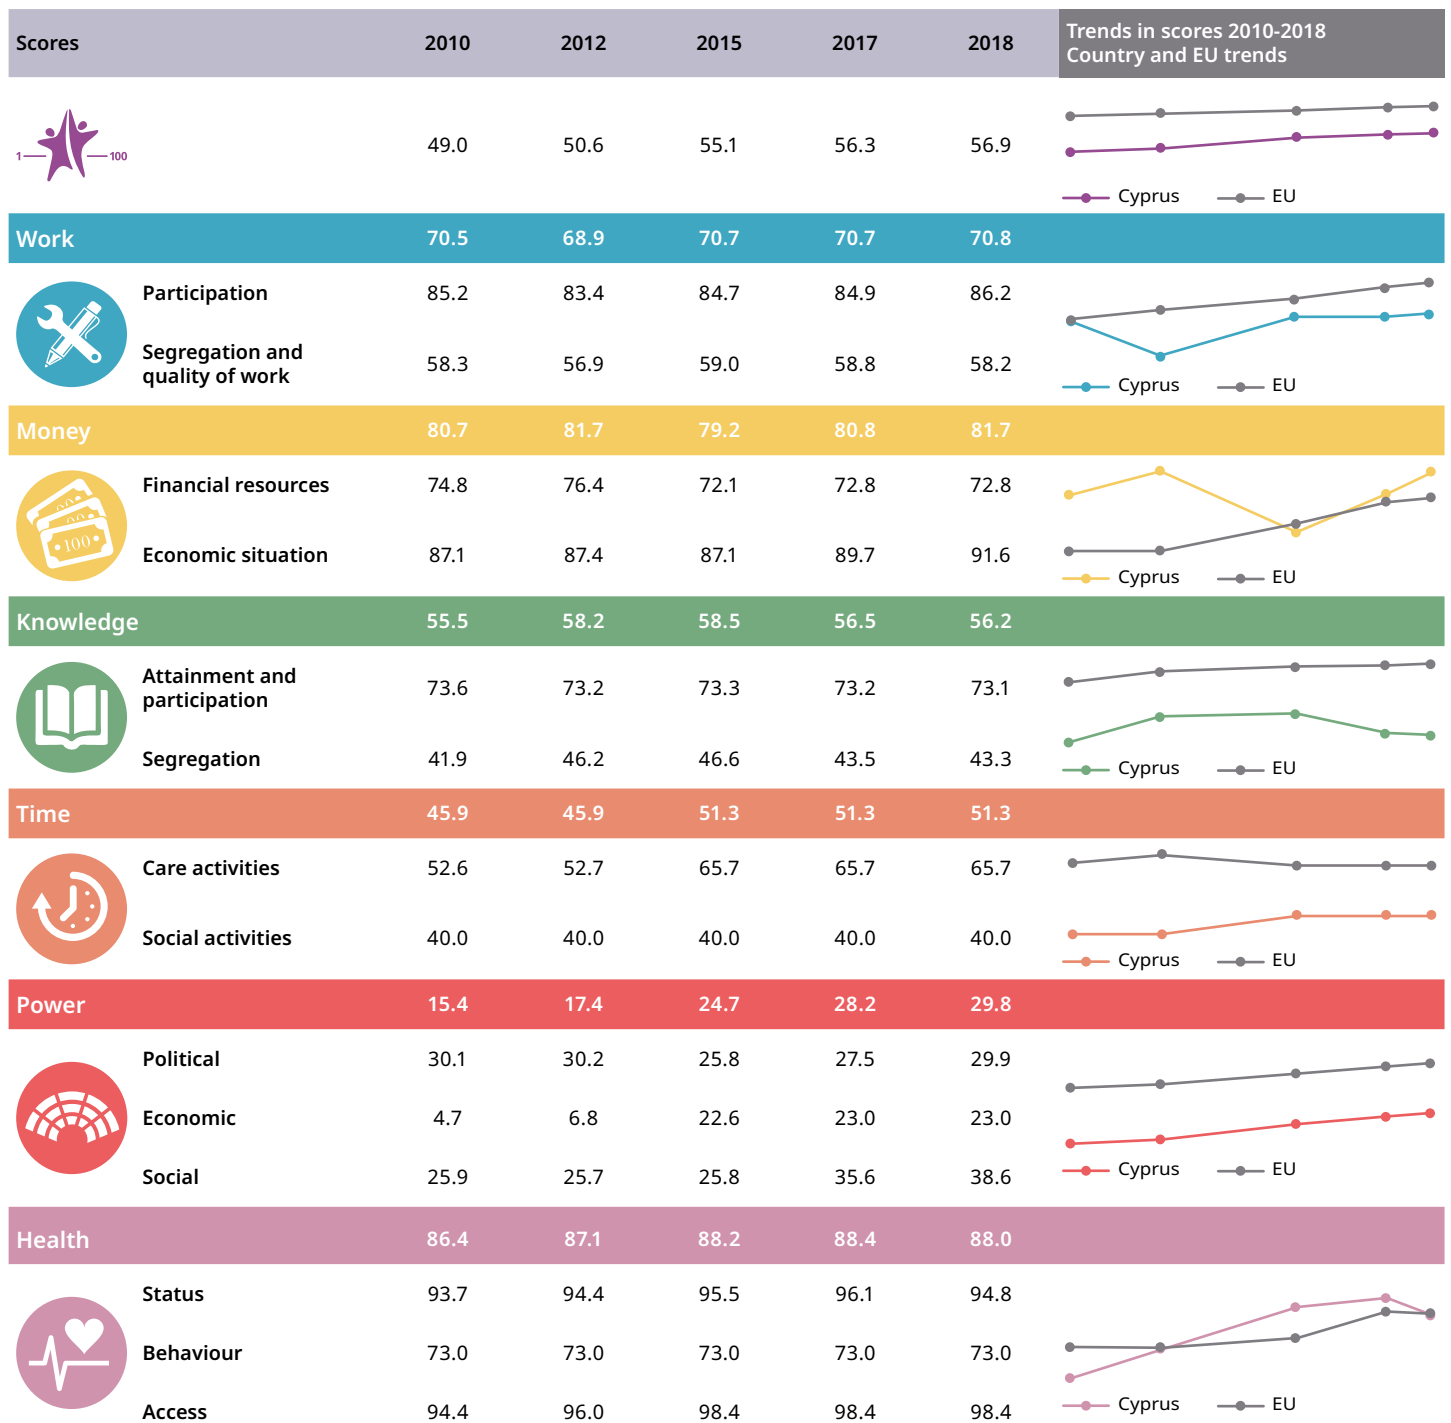

Biggest improvement

Since 2010, Cyprus's scores have improved in all domains. The biggest improvements are in the domains of power (+ 14.4 points) and time (+ 5.4 points).

Least progress

Cyprus has made the least progress in the domains of work (+ 0.3 points), knowledge (+ 0.7 points) and money (+ 1 point).

Explore Cyprus's Index results

About the Index

Each year, we score the EU Member States and the EU as a whole to see how far they are from reaching gender equality. The Index uses **a scale of 1 to 100, where 1 is for total inequality and 100 is for total equality.**

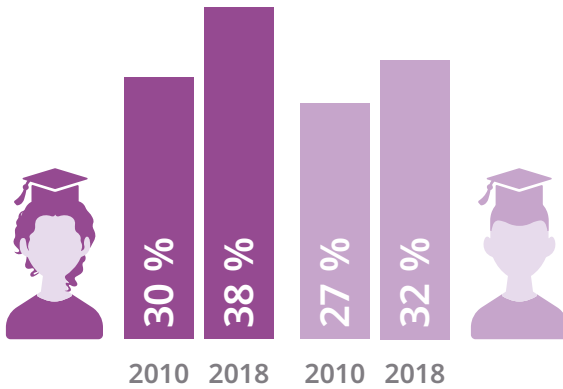

The scores are based on the gaps between women and men and levels of achievement in six core domains – work, money, knowledge, time, power and health – and **their subdomains. Two additional domains** are included in the Index but do not have an impact on the final score. The domain of intersecting inequalities highlights how gender inequalities manifest in combination with age, (dis)ability, country of birth, education and family type. The domain of violence against women measures and analyses women's experiences of violence. The Index is composed of **31 indicators.** The Gender Equality Index 2020 also includes **a thematic focus on digitalisation and the future of work.**

Key highlights

Improvements in economic decision-making

The shares of women on the board of the central bank and on the boards of the largest publicly listed companies have increased.

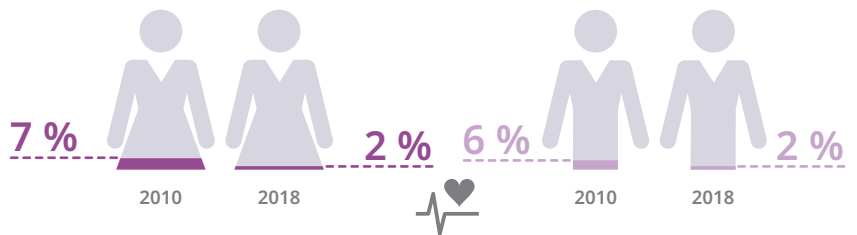

More graduates from tertiary education

Tertiary educational attainment is increasing among both women and men.

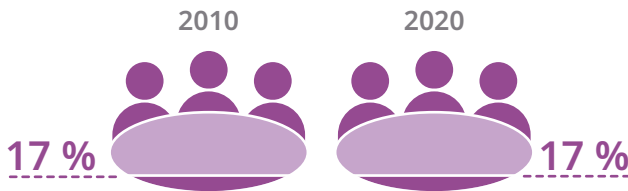

Improved access to medical care

Unmet needs for medical care have decreased for women and men.

Women ministers

Improvements stagnate in political decision-making

The number of women ministers remains the same after 10 years.

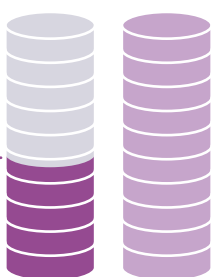

Uneven concentration of women and men in education is a persistent problem

More women than men are studying education, health and welfare, or humanities and the arts.

-53 %

Born outside the EU

Gender inequalities in earnings persist, especially for some groups

There is a big gender gap in mean monthly earnings between women and men born outside the EU. Women earn about half as much as men.

Violence

Why is there no score for the violence domain?

There is no new data to update the score for violence, which is why no figure is given. Eurostat is currently coordinating an EU-wide survey on gender-based violence, with results expected in 2023. EIGE will launch a second round of administrative data collection on intimate partner violence, rape and femicide in 2022. Both data sources will be used to update the domain of violence in the Gender Equality Index 2024.

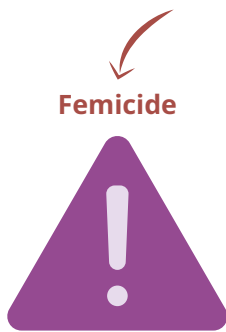

Unlike the other domains of the Index, the domain of violence does not measure differences between women's and men's situations; rather, it examines women's experiences of violence (prevalence, severity and disclosure). The overall objective is not to reduce the gaps in violence between women and men, but to eradicate violence completely.

Data gaps mask the true scale of violence.

The EU needs comprehensive, up-to-date and comparable data to develop effective policies that combat violence against women.

Violence at a glance

Femicide

No data available

Female Genital Mutilation (FGM)

12 % to 17 % of 758 girls (in the resident migrant population) are at risk of female genital mutilation

Source: EIGE

Cyberviolence

2 % of women experienced online harassment

Source: Eurofound, European Quality of Life Survey

During the COVID-19 lockdowns, women in violent relationships were stuck at home and exposed to their abuser for long periods of time, putting them at greater risk of domestic violence. Even without a pandemic, women face the greatest danger from people they know.

Istanbul Convention: state of play

The Istanbul Convention is the most comprehensive international human rights treaty on violence against women and domestic violence. Cyprus signed the Convention in June 2015 and ratified it in November 2017. The treaty entered into force in March 2018.

Thematic focus on digitalisation and the future of work

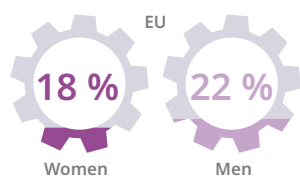

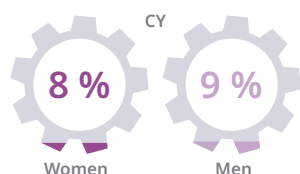

The Gender Equality Index 2020 focuses on digitalisation and the future of work. The thematic focus looks at three areas:

- use and development of digital skills and technologies;
- digital transformation of the world of work (segregation, working conditions, work-life balance);
- broader consequences of digitalisation for human rights, violence against women, and caring activities.

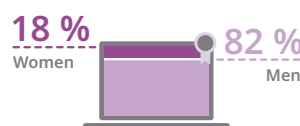

Internet daily users

Training to improve digital skills

ICT specialists

Main indicators	Cyprus		EU	
	Women	Men	Women	Men
Digital skills				
Internet daily users (16–74, %, 2019)	79	79	78	80
Above basic digital skills (16–74, %, 2019)	25	25	31	36
<i>Information skills</i>	73	72	71	71
<i>Communications skills</i>	72	71	67	66
<i>Problem-solving skills</i>	43	44	56	63
<i>Software skills</i>	31	29	39	44
Training to improve digital skills (16–74, %, 2018)	8	9	18	22
Segregation in education and labour market				
ICT graduates (% , 2018)	30	70	20	80
ICT specialists (15 +, %, 2019)	18	82	18 (s)	82 (s)
Scientists and engineers in high-technology sectors (25–64, %, 2019)	23 (u)	74	20	80
Working in ICT				
ICT at work and activities performed (16–74, %, 2018)				
<i>Used computer, laptop, smartphone, etc.</i>	35	35	37	42
<i>Used other computerised equipment</i>	1	2	8	13
<i>Exchanged emails</i>	28	29	32	36
<i>Created or edited electronic documents</i>	27	27	24	28
<i>Used social media</i>	10	10	9	11
<i>Used applications to receive tasks or instructions</i>	5	9	10	14
<i>Used occupation-specific software</i>	13	15	19	24
<i>Developed or maintained IT systems or software</i>	1	4	3	7
Part-time in ICT (20–64, %, 2018)	2	2	17	5
Working time arrangements among ICT specialists (20–64, %, 2015, national-level data not available)				
			In the EU, 21 % of women and 22 % of men entirely determined their working hours themselves, compared with 13 % of women and 18 % of men in other occupations	
Gender pay gap in ICT (% , 2014)		8		11

Sources: Eurostat (education statistics, digital economy and society statistics, European Union Labour Force Survey, Structure of Earnings Survey), Eurofound (European Working Conditions Survey).
u: low reliability.
s: Eurostat estimate.
Some areas of concern (e.g. platform work and artificial intelligence) are not covered by the indicators owing to a lack of EU-wide comparable data.

European Institute for Gender Equality

The European Institute for Gender Equality (EIGE) is the EU knowledge centre on gender equality. EIGE supports policymakers and all relevant institutions in their efforts to make equality between women and men a reality for all Europeans by providing them with specific expertise and comparable and reliable data on gender equality in Europe.
