

Gender Equality Index 2020 LITHUANIA

Progress on gender equality in Lithuania since 2010

With 56.3 out of 100 points, Lithuania ranks 22nd in the EU on the Gender Equality Index. Its score is 11.6 points below the EU's score.

Since 2010, Lithuania's score has increased by only 1.4 points (+ 0.8 points since 2017). Its ranking has dropped by four places since 2010.

Best performance

Lithuania's scores are highest in the domains of health (80.0 points) and work (74.1 points). Its highest ranking is in the domain of work, where it ranks 11th among all countries.

Most room for improvement

Gender inequalities are most pronounced in the domain of power (34.1 points), in which Lithuania ranks 21st. Compared with other countries, Lithuania's scores are also low in the domains of money and health (ranking 25th in both domains).

Biggest improvement

Since 2010, Lithuania's score has improved the most in the domain of money (+ 5.3 points). Its ranking has improved by one place in this domain.

A step backwards

Since 2010, Lithuania's scores have decreased in the domains of time (– 1.6 points) and health (– 0.4 points). Its ranking has dropped by six places in the domain of power, despite a slight increase in the score (+ 1.2 points).

The most recent reference period for data used in the 2020 Index is January 2020. The EU aggregate refers to the EU-28 and includes the United Kingdom because during the reference period the United Kingdom was a Member State.

About the Index

Each year, we score the EU Member States and the EU as a whole to see how far they are from reaching gender equality. The Index uses a scale of 1 to 100, where 1 is for total inequality and 100 is for total equality.

The scores are based on the gaps between women and men and levels of achievement in six core domains – work, money, knowledge, time, power and health – and **their subdomains. Two additional domains** are included in the Index but do not have an impact on the final score. The domain of intersecting inequalities highlights how gender inequalities manifest in combination with age, (dis)ability, country of birth, education and family type. The domain of violence against women measures and analyses women's experiences of violence. The Index is composed of **31 indicators**. The Gender Equality Index 2020 also includes **a thematic focus on digitalisation and the future of work**.

Key highlights

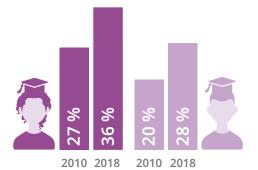

Financial situation improved for both women and men

Mean monthly earnings have increased for both women and men since 2010.

More graduates from tertiary education

There has been an increase in tertiary educational attainment among both women and men.

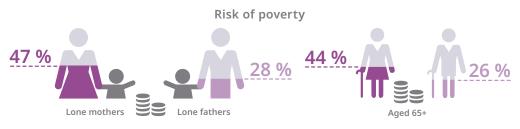

Improvements in political decisionmaking

The share of women among ministers has increased.

Inequality in economic situation

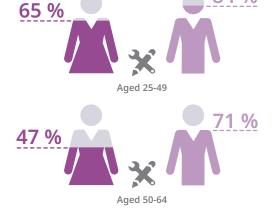

The risk of poverty has increased for women. Lone mothers and older women face a higher risk of poverty than lone fathers and older men.

84 %

Gender inequalities in employment

The gender gap in full-time equivalent (FTE) employment is wider between older women and men than between younger women and men.

0 14 %

12 %

Progress stalls on economic decision-making

The share of women on the boards of the largest publicly listed companies has decreased.

Why is there no score for the violence domain?

There is no new data to update the score for violence, which is why no figure is given. Eurostat is currently coordinating an EU-wide survey on gender-based violence, with results expected in 2023. EIGE will launch a second round of administrative data collection on intimate partner violence, rape and femicide in 2022. Both data sources will be used to update the domain of violence in the Gender Equality Index 2024.

Unlike the other domains of the Index, the domain of violence does not measure differences between women's and men's situations; rather, it examines women's experiences of violence (prevalence, severity and disclosure). The overall objective is not to reduce the gaps in violence between women and men, but to eradicate violence completely.

Data gaps mask the true scale of violence.

The EU needs comprehensive, up-to-date and comparable data to develop effective policies that combat violence against women.

6 women killed by a family member 3 women killed by their partner

Source: Furostat

No data available

3 % of women experienced online harassment

Source: Eurofound, European Quality of Life Survey

During the COVID-19 lockdowns, women in violent relationships were stuck at home and exposed to their abuser for long periods of time, putting them at greater risk of domestic violence. Even without a pandemic, women face the greatest danger from people they know.

Istanbul Convention: state of play

The Istanbul Convention is the most comprehensive international human rights treaty on violence against women and domestic violence. Lithuania signed the Istanbul Convention in June 2013 but is yet to ratify it.

Thematic focus on digitalisation and the future of work

The Gender Equality Index 2020 focuses on digitalisation and the future of work. The thematic focus looks at three areas:

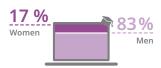

- use and development of digital skills and technologies;
- digital transformation of the world of work (segregation, working conditions, work-life balance);
- broader consequences of digitalisation for human rights, violence against women, and caring activities.

Above basic software skills in the 25 - 29 age group
