

Progress on gender equality in the United Kingdom since 2010

With 72.7 out of 100 points, the United Kingdom ranks 6th in the EU on the Gender Equality Index. The United Kingdom's score is 4.8 points above the EU's score.

Since 2010, its score has increased by 4.0 points. Only a slight increase (0.5 points) has been achieved since 2017. The United Kingdom's ranking has remained the same since 2010.

Best performance

The United Kingdom's scores are highest in the domains of health (92.8 points) and money (80.4 points). In the domain of health, it has one of the highest scores among all countries (ranking 2nd).

Most room for improvement

Gender inequalities are most pronounced in the domain of power (60.0 points), although it has one of the highest scores among all countries (ranking 7th). Its lowest ranking is in the domain of money (14th), with a score of 80.4 points.

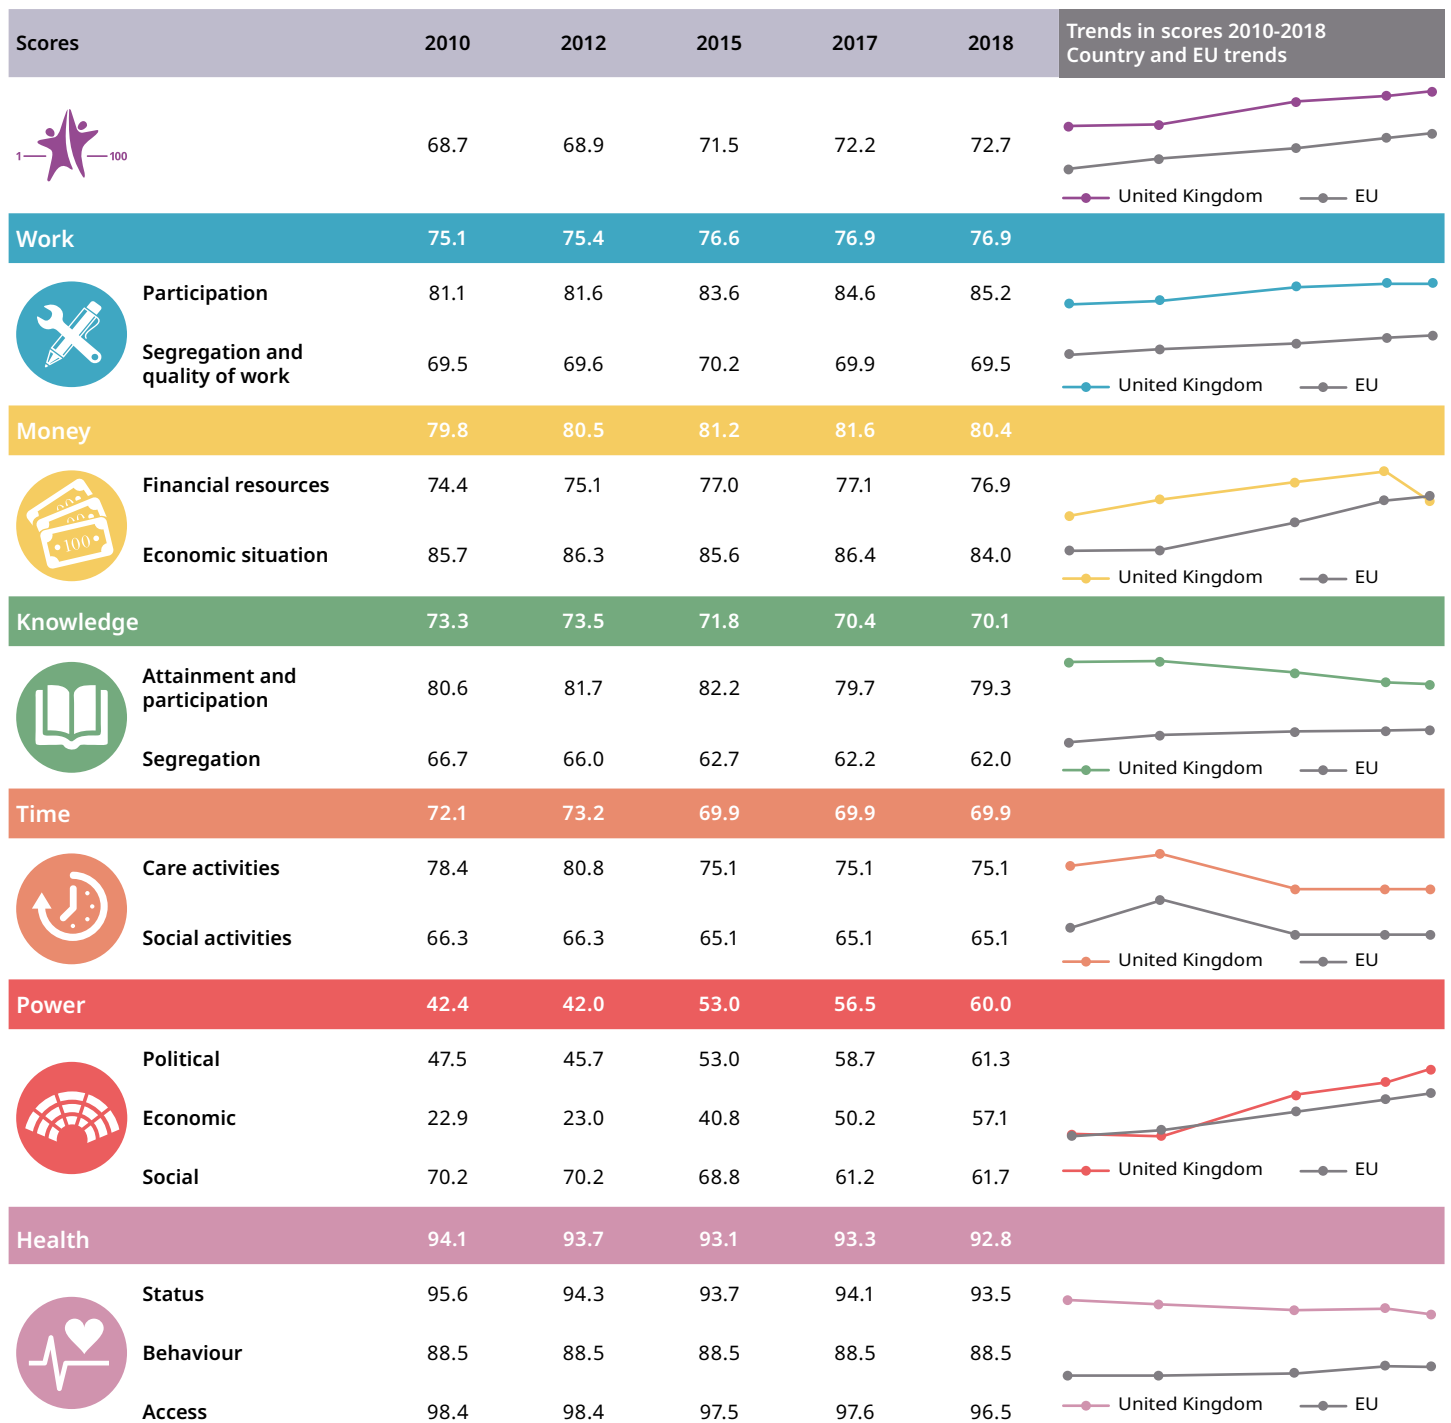

Biggest improvement

Since 2010, the United Kingdom has made its biggest improvement in the domain of power (+ 17.6 points). In this domain, its ranking has improved by two places since 2010.

A step backwards

Since 2010, the United Kingdom's scores have decreased in the domains of knowledge (- 3.2 points), time (- 2.2 points) and health (- 1.3 points).

Explore United Kingdom's Index results

About the Index

Each year, we score the EU Member States and the EU as a whole to see how far they are from reaching gender equality. The Index uses **a scale of 1 to 100, where 1 is for total inequality and 100 is for total equality.**

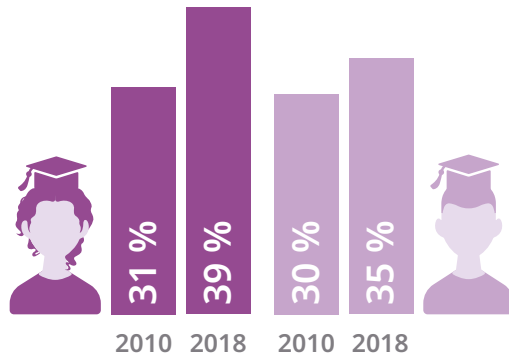

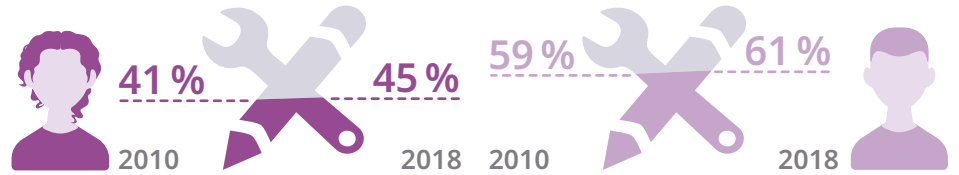

The scores are based on the gaps between women and men and levels of achievement in six core domains – work, money, knowledge, time, power and health – and **their subdomains. Two additional domains** are included in the Index but do not have an impact on the final score. The domain of intersecting inequalities highlights how gender inequalities manifest in combination with age, (dis)ability, country of birth, education and family type. The domain of violence against women measures and analyses women's experiences of violence. The Index is composed of **31 indicators.** The Gender Equality Index 2020 also includes **a thematic focus on digitalisation and the future of work.**

Key highlights

Increase in labour market participation

The full-time equivalent (FTE) employment rate has risen for both women and men, narrowing the gender gap.

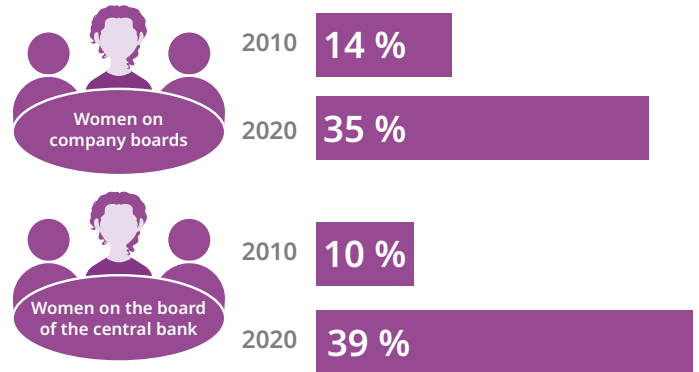

More graduates from tertiary education

Tertiary educational attainment is increasing among both women and men.

Moving towards gender balance in economic decision-making

The shares of women on the boards of the largest publicly listed companies and on the board of the central bank have increased.

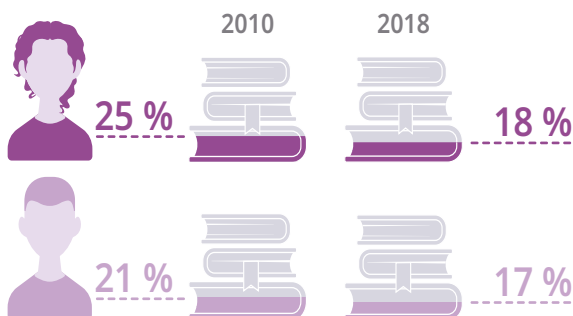

Gender gap in employment is larger for some groups

Between women and men in couples with children, the gap in FTE employment is much wider than in couples without children.

The uneven concentration of women and men in education is a persistent problem

More women than men are studying education, health and welfare, or humanities and the arts.

Reduced participation in lifelong learning

Participation in formal or non-formal education and training has decreased among women and men.

Violence

Why is there no score for the violence domain?

There is no new data to update the score for violence, which is why no figure is given. Eurostat is currently coordinating an EU-wide survey on gender-based violence, with results expected in 2023. EIGE will launch a second round of administrative data collection on intimate partner violence, rape and femicide in 2022. Both data sources will be used to update the domain of violence in the Gender Equality Index 2024.

Unlike the other domains of the Index, the domain of violence does not measure differences between women's and men's situations; rather, it examines women's experiences of violence (prevalence, severity and disclosure). The overall objective is not to reduce the gaps in violence between women and men, but to eradicate violence completely.

Data gaps mask the true scale of violence.

The EU needs comprehensive, up-to-date and comparable data to develop effective policies that combat violence against women.

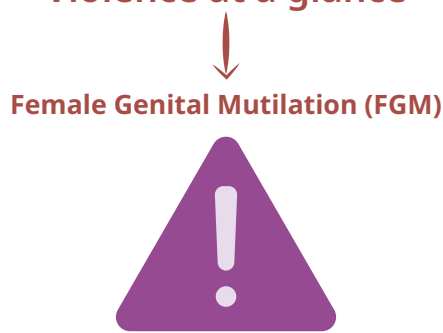

Violence at a glance

Femicide

**33 women killed by a family member
75 women killed by their partner**

Source: Eurostat

Female Genital Mutilation (FGM)

No data available

Cyberviolence

**5 % of women experienced
online harassment**

Source: Eurofound, European Quality of Life Survey

During the COVID-19 lockdowns, women in violent relationships were stuck at home and exposed to their abuser for long periods of time, putting them at greater risk of domestic violence. Even without a pandemic, women face the greatest danger from people they know.

Istanbul Convention: state of play

The Istanbul Convention is the most comprehensive international human rights treaty on violence against women and domestic violence. The United Kingdom signed the Istanbul Convention in June 2012 but is yet to ratify it.

Thematic focus on digitalisation and the future of work

The Gender Equality Index 2020 focuses on digitalisation and the future of work. The thematic focus looks at three areas:

- use and development of digital skills and technologies;
- digital transformation of the world of work (segregation, working conditions, work-life balance);
- broader consequences of digitalisation for human rights, violence against women, and caring activities.

Above basic communication skills among those with a low level of formal education

ICT specialists

Part-time work in ICT

Main indicators	United Kingdom		EU	
	Women	Men	Women	Men
Digital skills				
Internet daily users (16-74, %, 2019)	90	92	78	80
Above basic digital skills (16-74, %, 2019)	44	53	31	36
<i>Information skills</i>	82	82	71	71
<i>Communications skills</i>	81	78	67	66
<i>Problem-solving skills</i>	72	80	56	63
<i>Software skills</i>	53	60	39	44
Training to improve digital skills (16-74, %, 2018)	(u)	(u)	18	22

Segregation in education and labour market				
ICT graduates (% , 2018)	18 (d)	82 (d)	20	80
ICT specialists (15 +, %, 2019)	18	82	18 (s)	82 (s)
Scientists and engineers in high-technology sectors (25-64, %, 2019)	16	84	20	80

Working in ICT				
ICT at work and activities performed (16-74, %, 2018)				
<i>Used computer, laptop, smartphone, etc.</i>	46	51	37	42
<i>Used other computerised equipment</i>	10	15	8	13
<i>Exchanged emails</i>	40	44	32	36
<i>Created or edited electronic documents</i>	34	39	24	28
<i>Used social media</i>	12	16	9	11
<i>Used applications to receive tasks or instructions</i>	17	25	10	14
<i>Used occupation-specific software</i>	25	29	19	24
<i>Developed or maintained IT systems or software</i>	5	11	3	7
Part-time in ICT (20-64, %, 2018)	16	3	17	5

Working time arrangements among ICT specialists (20-64, %, 2015, national-level data not available)

In the EU, 21 % of women and 22 % of men entirely determined their working hours themselves, compared with 13 % of women and 18 % of men in other occupations

Gender pay gap in ICT (% , 2014)

14 11

Sources: Eurostat (education statistics, digital economy and society statistics, European Union Labour Force Survey, Structure of Earnings Survey), Eurofound (European Working Conditions Survey).

s: Eurostat estimate.

u: low reliability.

d: definition differs, see EUROSTAT.

Some areas of concern (e.g. platform work and artificial intelligence) are not covered by the indicators owing to a lack of EU-wide comparable data.

European Institute for Gender Equality

The European Institute for Gender Equality (EIGE) is the EU knowledge centre on gender equality. EIGE supports policymakers and all relevant institutions in their efforts to make equality between women and men a reality for all Europeans by providing them with specific expertise and comparable and reliable data on gender equality in Europe.
