

# Gender Equality Index 2020 AUSTRIA

# Progress on gender equality in Austria since 2010

With 66.5 out of 100 points, Austria ranks 13th in the EU on the Gender Equality Index. Its score is 1.4 points lower than the EU's score.

Since 2010, Austria's score has increased by 7.8 points (+ 1.2 points since 2017). The country's ranking has remained the same since 2010.

# Best performance

Austria's highest scores are in the domains of health (91.9 points) and money (86.7 points), in which it also performs the best in comparison with other Member States (ranking 4th and 7th, respectively).

# Most room for improvement

Austria's lowest scores are in the domains of power (44.2 points) and time (61.2 points). In these domains, it performs the worst in comparison with other Member States (ranking 17t

# Biggest improvement

The biggest improvement is in the domain of power (+ 15.8 points). Austria's ranking in this domain has improved by three places since 2010.

# Least progress

Progress has stalled in the domain of health (+ 0.8 points) and has been moderate in the domain of work (+ 1.1 points). In both domains, Austria's ranking has dropped by one place since 2010.

## **About the Index**

Each year, we score the EU Member States and the EU as a whole to see how far they are from reaching gender equality. The Index uses a scale of 1 to 100, where 1 is for total inequality and 100 is for total equality.

The scores are based on the gaps between women and men and levels of achievement in six core domains – work, money, knowledge, time, power and health – and **their subdomains**. **Two additional domains** are included in the Index but do not have an impact on the final score. The domain of intersecting inequalities highlights how gender inequalities manifest in combination with age, (dis)ability, country of birth, education and family type. The domain of violence against women measures and analyses women's experiences of violence. The Index is composed of **31 indicators**. The Gender Equality Index 2020 also includes **a thematic focus on digitalisation and the future of work**.

## **Key highlights**

#### Improvements in economic decisionmaking

The share of women on the boards of the largest publicly listed companies has increased. Austria introduced legislative guotas of 30 % in 2017.

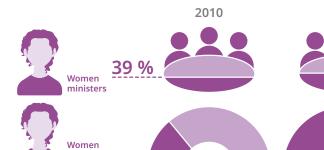

2020

2010

2020

**Moving towards** gender parity in political decision-making

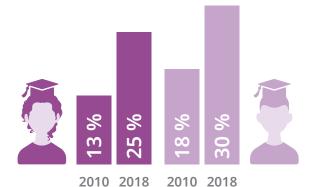

The shares women ministers and members of parliament have increased.

#### More graduates from tertiary education

members of parliament

Tertiary educational attainment is increasing among both women and men.

#### Improvements in employment stagnate for both women and men

The full-time equivalent (FTE) employment rate has not improved for women and has slightly decreased for men.

Uneven concentration of women and men persists in the workforce

More women than men work in education, health and social work.

28 %

Uneven concentration of women and men in education is a persistent problem

Around twice as many women as men study education, health and welfare, or humanities and the arts.

# **Explore Austria's performance by indicator**

	Indicators		Austria		EU	
				Men	Women	Men
Work	Participation	Full-time equivalent (FTE) employment rate* (15 +, %, 2018)	42	61	42	57
		Duration of working life (15 +, years, 2018)	35	40	34	39

### Why is there no score for the violence domain?

There is no new data to update the score for violence, which is why no figure is given. Eurostat is currently coordinating an EU-wide survey on gender-based violence, with results expected in 2023. EIGE will launch a second round of administrative data collection on intimate partner violence, rape and femicide in 2022. Both data sources will be used to update the domain of violence in the Gender Equality Index 2024.

Unlike the other domains of the Index, the domain of violence does not measure differences between women's and men's situations; rather, it examines women's experiences of violence (prevalence, severity and disclosure). The overall objective is not to reduce the gap in violence between women and men but to eradicate violence completely.

Data gaps mask the true scale of violence.

The EU needs comprehensive, up-to-date and comparable data to develop effective policies that combat violence against women.

No data available

No data available

12 % of women experienced online harassment

Source: Eurofound, European Quality of Life Survey

During the COVID-19 lockdowns, women in violent relationships were stuck at home and exposed to their abuser for long periods of time, putting them at greater risk of domestic violence. Even without a pandemic, women face the greatest danger from people they know.

### **Istanbul Convention: state of play**

The Istanbul Convention is the most comprehensive international human rights treaty on violence against women and domestic violence. Austria signed the Istanbul Convention in May 2011 and ratified it in November 2013. The treaty entered into force in August 2014.

# Thematic focus on digitalisation and the future of work

The Gender Equality Index 2020 focuses on digitalisation and the future of work. The thematic focus looks at three areas:

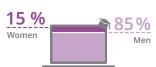

- use and development of digital skills and technologies;
- digital transformation of the world of work (segregation, working conditions, work-life balance);
- broader consequences of digitalisation for human rights, violence against women and caring activities.

#### Internet daily users among those with a low level of formal education

#### **ICT** graduates

Part-time in ICT

	Austria		EU	
Main indicators	Women	Men	Women	Men
Digital skills				
Internet daily users (16–74, %, 2019)	76	84	78	80
Above basic digital skills (16–74, %, 2019)	37	41	31	36
Information skills	72	75	71	71
Communications skills	64	65	67	66
Problem-solving skills	59	70	56	63
Software skills	46	55	39	44
Training to improve digital skills (16–74, %, 2018)	19	32	18	22
Segregation in education and labour market				
ICT graduates (%, 2018)	15	85	20	80
ICT specialists (15 +, %, 2019)	20	80	18 (s)	82 (s)
Scientists and engineers in high-technology sectors (25–64, %, 2019)	23	77	20	80
Working in ICT				
ICT at work and activities performed (16–74, %, 2018)				
Used computer, laptop, smartphone, etc.	42	51	37	42
Used other computerised equipment	7	16	8	13
Exchanged emails	39	48	32	36
Created or edited electronic documents	29	35	24	28
Used social media	10	11	9	11
Used applications to receive tasks or instructions	7	14	10	14
Used occupation-specific software	28	39	19	24
Developed or maintained IT systems or software	3	10	3	7
Part-time in ICT (20–64, %, 2018)	34	10	17	5

Working time arrangements among ICT specialists (20–64, %, 2015, national-level data not available)

Gender pay gap in ICT 16 11 (%, 2014)

Source: Eurostat (education statistics, digital economy and society statistics, European Union Labour Force Survey, Structure of Earnings Survey), Eurofound (European Working Conditions Survey).

s: Eurostat estimate

Some areas of concern (e.g. platform work and artificial intelligence) are not covered by the indicators owing to a lack of EU-wide comparable data.
