

Measuring femicide in Czechia

Femicide

Femicide can be understood as the extreme end of a continuum of violence against women that happens in all European Union Member States ⁽¹⁾. There is no standard agreed definition of femicide among EU Member States or around the world. The lack of a uniform definition hampers the measurement of femicide, which becomes invisible among general homicide data ⁽²⁾. The general concept of femicide refers to the killing of a woman or girl because of her gender. The United Nations Vienna Declaration on Femicide ⁽³⁾ was the first to identify different types of femicide, including:

- murder of women as a result of intimate partner violence;
- torture and misogynistic slaying of women;
- killing of women and girls in the name of honour;
- targeted killing of women and girls in the context of armed conflict;
- dowry-related killing of women;
- killing of women and girls because of their sexual orientation and gender identity;
- killing of aboriginal and indigenous women and girls because of their gender;
- female infanticide and gender-based sex selection foeticide;
- genital mutilation-related deaths;
- accusations of witchcraft;
- other types of femicide connected with gangs, organised crime, drug dealers, human trafficking and the proliferation of small arms.

Femicide in Czechia

There is no definition of femicide in the Czech Criminal Code. However, this type of offence may fall under other provisions of Czech criminal law. The relevant sections for identifying femicide cases are, inter alia, Sections 140 and 141 ⁽⁴⁾.

Section 140 – Murder

(1) Whoever intentionally kills another person shall be sentenced to imprisonment for 10 to 18 years.

(2) Whoever intentionally kills another person with premeditation and after prior consideration shall be sentenced to imprisonment for 12 to 20 years.

(3) An offender shall be sentenced to imprisonment for 15 to 20 years or to an exceptional sentence of imprisonment if he or she commits an act referred to in subsection (1) or (2):

(a) on two or more persons,

(b) on a pregnant woman,

(c) on a child under 15 years of age,

[...]

(g) on another person for their true or presupposed race, belonging to an ethnic group, nationality, political beliefs, religion or because of his or her true or presupposed lack of religious faith,

(h) repeatedly,

(i) in a particularly cruel or agonising manner, or

(j) with the intention to obtain for himself or herself or for another material profit, or in an attempt to conceal or facilitate another criminal offence, or out of another condemnable motive.

Section 141 – Manslaughter

(1) Whoever intentionally kills another person in strong derangement caused by fear, shock, confusion or another excusable mental episode or as a result of previous condemnable conduct of the aggrieved person shall be sentenced to imprisonment for 3 to 10 years.

(2) An offender shall be sentenced to imprisonment for 5 to 15 years if he or she commits an act referred to in subsection (1):

(a) on two or more persons,

(b) on a pregnant woman, or

(c) on a child under 15 years of age.

⁽¹⁾ This factsheet includes data collected before the United Kingdom left the EU, so the reference to EU Member States includes the United Kingdom.

Intimate partner femicide in Europe

From a statistical perspective, and based on the International Classification of Crime for Statistical Purposes (ICCS), the UN Office on Drugs and Crime (UNODC) highlights that intentional homicide of female victims perpetrated by intimate partners or family members is the most prevalent form of femicide ⁽⁵⁾. UNODC estimates that, in Europe ⁽⁶⁾, about 29 % of female victims of homicide ⁽⁷⁾ are killed intentionally by an intimate partner.

Intimate partner femicide in Czechia

From a statistical perspective, the working definition that the European Institute for Gender Equality (EIGE) uses for femicide is 'killing of a woman by an intimate partner and the death of a woman as a consequence of a practice that is harmful to women. Intimate partner is understood as a former or current spouse or partner, whether or not the perpetrator shares or has shared the same residence with the victim'. In Czechia, most femicides would be covered by the sections of the Criminal Code identified above. According to data from the Czech police, in 2017 there were 41 female ⁽⁸⁾ victims of homicide ⁽⁹⁾, of whom 61 % were victims of intimate partner femicide ($n = 25$) ⁽¹⁰⁾.

Female victims of homicide and intimate partner femicide in Czechia

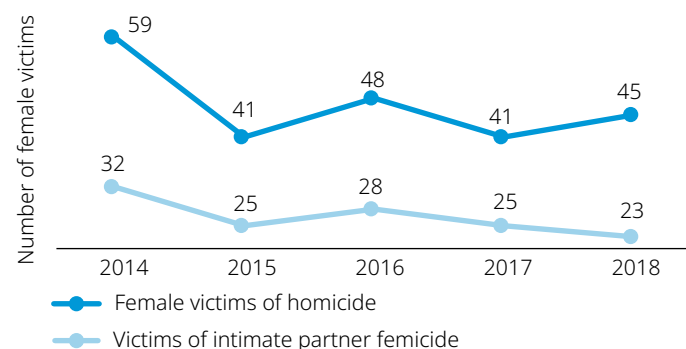

The official administrative data used in Figure 1 is collected by the Czech police. EIGE has gathered data on homicide and intimate partner femicide for 2014 to 2018. Figure 1 includes data regarding female victims of homicide and intimate partner femicide.

Data on intimate partner femicide refers to cases in which it was possible to identify an intimate relationship between a female victim and a male perpetrator. Owing to some inconsistencies in the data collected between 2016 and 2018, Figure 1 should be interpreted only as indicative, as the data is not comparable.

Type of relationship between the victim and the perpetrator

The Czech police collects data on the type of intimate relationship between the victim and the perpetrator according to the following classifications: (i) partner and (ii) ex-partner. The statistics do not provide information on whether victims and perpetrators were sharing a common dwelling at the time of the killing.

Figure 1: Female victims of homicide and intimate partner femicide in Czechia (non-comparable data)

Source: EIGE's Gender Statistics Database.

About the study

Data collection systems vary widely across EU Member States, as they draw on various sources. To improve the collection of administrative data on femicide, EIGE has been working to establish indicators that can harmonise data collection processes across Member States' jurisdictions.

EIGE has collected information from a wide variety of stakeholders through a questionnaire sent to official data providers and an online survey filled in by national experts. The ultimate goal is to identify a classification system of femicide with mutually agreed variables that can be used by all EU Member States.

Methodology for data collection

To address the lack of comparable data on violence against women, EIGE developed 13 indicators with uniform definitions of the multiple forms of intimate partner violence, femicide and rape ⁽¹¹⁾. A detailed report regarding the methodology for the collection, reporting and validation of data, along with detailed metadata per country, has been published ⁽¹²⁾. The data presented in this factsheet refers to indicator 9 on intimate partner violence: 'Women victims of intimate femicide (aged 18 and over) committed by a male intimate partner (aged 18 and over), as a share of the women victims of homicide aged 18 and over'. The data can be accessed through EIGE's Gender Statistics Database (https://eige.europa.eu/gender-statistics/dgs/browse/genvio/genvio_int).

⁽⁵⁾ UN Office on Drugs and Crime (UNODC) (2019), *Global Study on Homicide – Gender-related killing of women and girls*, UNODC, Vienna.

⁽⁶⁾ Data from UNODC includes European jurisdictions other than the EU Member States. There is no estimation of the percentage of female victims of homicide who were victims of intimate partner femicide limited to EU Member States.

⁽⁷⁾ The term 'homicide' is used when reporting UNODC data given that it is the term used in the original source (p. 17). The gender-related motivation is not recorded, because of the lack of a standardised definition. However, it is clear from the report that this data quantifies a significant share of all gender-related killings of women and girls.

⁽⁸⁾ The term 'female' is used instead of 'woman', as it is not always possible to disaggregate data by the victim's age, meaning that the victim could be either a woman or a girl aged under 18 years.

⁽⁹⁾ The term 'homicide' is used, given that the gender-related motivation for the intentional homicides is not recorded, and therefore it is not possible to classify all the killings as femicides.

⁽¹⁰⁾ Data is available at: https://eige.europa.eu/gender-statistics/dgs/indicator/genvio_int_adm_ipv_ipv_indic_9/metadata

Collecting administrative data on femicide

What is administrative data? Administrative data is collected for recording, organising and monitoring purposes⁽¹³⁾. Administrative data on femicide can be obtained from different institutions, namely those that are involved in criminal investigations, prosecutions, the punishment of perpetrators and victim support – that is, institutions in the **police and justice sectors**. Administrative data might include information about the prevalence and types of femicide, the characteristics of the victim, the perpetrator and their relationship, the characteristics of and motive for the crime, and data about the criminal process.

In order to help policymakers design effective policies to combat femicide, it is necessary to understand the nature and prevalence of the issue. The collection of comparable administrative data on femicide across Member States is key to gaining this understanding⁽¹⁴⁾. It is particularly important that the motive for the killing is established by the police or judiciary and that this is then translated into standardised statistical data. The ICCS is a standardised tool for obtaining comparable

administrative data. However, it lacks a gender-related motive variable. This means that the concept of femicide cannot be properly operationalised, which prevents the collection of data that fully captures the phenomenon. The collection of data on femicide would make the issue more visible, which would strengthen the political will to eradicate it. Administrative data on femicide also enables countries to monitor trends over time and evaluate the effectiveness of measures.

What administrative data on femicide is available in Czechia?

Definition of femicide and availability of data		
Definition of femicide used for statistical purposes	No	
Collection of data on femicide	Yes, official data	Yes, non-official data

Two institutions collect or analyse official data regarding femicide in Czechia: the Czech police⁽¹⁵⁾ and the Ministry of Justice⁽¹⁶⁾. Non-official data is collected by a non-governmental organisation: the Center for Women Victims of Domestic Violence

(ROSA)⁽¹⁷⁾. Where data on femicide in this factsheet is drawn from these institutions, this is indicated by (a), (b) and (c), respectively. There may be other institutions or researchers who collect and analyse data on femicide in Czechia.

	Institution (a) Czech police	Institution (b) Ministry of Justice	Institution (c) ROSA
Type of data collection	Official	Official	Non-official
Sources of data	Police crime investigations	Criminal case files (finished cases)	Cases reported in the media
Stage at which the homicide is established as a femicide	Not established	Not established	Information not available
Stage at which the homicide is registered as a femicide	Not registered	Not registered	Information not available
Regularity of data collection	Information not available	Continuous	Annual
Availability of data to the public	Data publicly available	Data publicly available	Data not publicly available

Female homicide in EU Member States and the United Kingdom (Eurostat)

At the EU level, based on the ICCS, Eurostat compiles data on intentional female homicides, focusing on intimate partner and family-related homicides, disaggregated by age, gender and relationship with the perpetrator. The data from Eurostat presented in Figure 2 reveals that, in 2019, the rate of female victims of homicide in Czechia was 0.72 per 100 000 inhabitants, the 13th lowest rate considering the 24 Member States and the

United Kingdom for which information is available. Czechia has the seventh lowest rate (0.13) of female victims of homicide perpetrated by family and relatives (out of 14 jurisdictions), and the fifth highest rate (0.30) of female victims of intentional homicide perpetrated by intimate partners (out of 14 jurisdictions).

Data information

Eurostat regularly publishes figures on crime and criminal justice. Intentional homicides are recorded by the police in each of the Member States and the United Kingdom. It is not possible to collect information about the gender-related motivation for homicide, the sex of the perpetrator or the age of the perpetrator using this database. Therefore, it is not possible to provide precise data on femicide.

Figures for 2008 onwards are based on the joint Eurostat-UNODC data collection. In this database, homicide is classified by the ICCS.

Data is available on Eurostat’s website (<https://ec.europa.eu/eurostat/data/database>).

Key findings

- Czechia does not have a legal definition of femicide. However, the perpetrator may be liable for murder or manslaughter.
- There are two main institutions that collect or analyse data for the identification of femicide. Data is available for intimate partner femicide and other types of femicide. Apart from public bodies, one non-governmental organisation collects non-official data.
- EIGE has gathered data on homicide and intimate partner femicide for 2014 to 2018; however, data may be available in Czechia for other years. Available data includes information about the characteristics of the victim and the perpetrator, and contextual variables.
- Femicide is analysed on the basis of official and non-official sources, such as data from police, data from court cases and media information.

Recommendations

The collection of accurate and comparable data on femicide by the police and justice sectors across Member States helps to increase knowledge and improve responses to prevent femicide⁽¹⁸⁾. It is therefore important to:

- develop a femicide definition for statistical data collection, in order to reflect the specific circumstances relating to the killing of women;
- implement a process of continuous data collection;
- establish comprehensive data collection, adding variables that are important for detecting key aspects of femicide, such as those describing the context and the circumstances of the killing, the gender-related motivation, and the victim and perpetrator characteristics, in order to systematise and harmonise the collection of data for statistical use;
- cross-reference the variables of the victim and those of the perpetrator, and analyse them using an intersectional approach;
- ensure that the gender dimension of homicide data is made visible.

This factsheet is based on information from EIGE's study 'Advancing administrative data collection on intimate partner violence and gender-related killings of women' (2021) and has been prepared by the Alternative and Response Women's Association (UMAR).
